To keep:

- Physical:
  - → BMI
  - → Eye strain
  - → Back Pain (take age into consideration)
  - → Sleep_hours
  - → Exercise_hours

- Psychological
  - → All of 3.3

- Gaming
  - → daily_gaming_hours
  - → weekend_gaming_hours
  - → microtransactions_spending (for addiction)
  - → years_gaming
  - → violent_games_ratio
  - → competitive_rank

- Social
  - → social_interaction_score
  - → parental_supervision (for age groups [≤18])
  - → toxic_exposure (connects to mental health
    - Compare with violent_gaming & competitive_rank

To ignore:

- Lifestyle Features (except sleep_hours & exercise_hours)
- Gaming
  - → multiplayer_ratio
  - → mobile_gamer_ratio
  - → esports_interest ← Maybe bring back for addiction
  - → Headset_usage
  - → weekly_sessions

Limitations

- Fully synthetic data set
- Some people's hours don't make sense
  - → 15y/o female plays 12hrs daily but only 3.4 hours on weekends. Also 0.42 hours at night
- Unclear if social_interaction_score is for online or in-person or both
- Self-reporting accuracy
